commissioning

BROEN is a company in motion - close to our customers

BROEN's experience has taught us that quality and safety are the most important qualities within district heating, cooling and gas. For more than a quarter of a century we have persistently refused to compromise these qualities.

At the same time we have chosen to be pioneers and close to our customers to obtain a profound knowledge of the market and provide the best service available. Today we have production facilities in five countries and sales offices and partners in most parts of the world.

This has given us a position as a market leader within ball valves.

Our market knowledge provides us with an understanding of the requirements and challenges of our customers. It is an ongoing process for us to become even better at providing new and optimized solutions that match the increasing requirements of the market.

BROEN BALLOMAX® is more than a famous brand
District heating and cooling systems are in many countries the most important source of energy – or about to become so. It is an environmentally gentle solution that does not scar the countryside and provides a healthy and comfortable result for the end-user.

Our products offer the important qualities required for the optimal system:
Safety is one of the concepts designed into a BROEN BALLOMAX®. The enormous power rushing through a district heating and cooling system puts great pressure on the components. Consequently, all components of a BROEN BALLOMAX® have been approved. The spindle is mounted from inside and cannot be ejected, and the water-based paint is harmless in the event of welding.

The maintenance of BROEN BALLOMAX® is minimal with no parts requiring replacement or lubrication. Everything has been made from the best raw materials and an annual activation of the ball ensures that it does not get stuck in the retainer. For the customer the BROEN BALLOMAX® means a minimum of work.

The long life is a very important feature of the BALLOMAX®. We know that the replacement of a defective valve involves great inconvenience and costs, and when you choose a BROEN BALLOMAX® you are beyond that.

We manufacture under the highest quality standards of the market in modern production facilities.

Bearing in mind the BROEN values – Straightforward, Insight, Initiative and Development – it is natural for us to be in constant motion and in close dialogue with our customers. BROEN solutions always incorporate the values of the company as well as of the product.

Rely on our worldwide
experience

Rely on intelligent
flow sectioning

BROEN is an international company and a global leader within its five business areas. We have subsidiaries and cooperation partners all over the world and employ more than 800 people. The BROEN intelligent flow solutions make it possible to control nature's resources.

BROEN BALLOMAX® offers a wide range of products

A world of solutions

Over the years we have designed and developed a wide range of high quality ball valves. Many of our best functioning solutions are the result a close cooperation with our customers.

BROEN BALLOMAX® is part of environmentally friendly renewable energy systems. This is one of the reasons why we apply exclusively water-based paint and maintenance free parts requiring neither replacement nor lubrication.

Our knowledge of the system reaches from the energy producer, under ground, from the main pipe to the service pipe, to the utility room or the basement, to the distribution among floors and to the individual wash basin. As a result BROEN always offers high quality advice and service.

Standard valve
female/welding
- a reliable combination

Standard valve
female/female
- a flexible solution

Standard valve
welding/welding
- strong isolation

Raw valve
- the well-known
high quality

Twin valve
- innovative, space-saving
solution for twinpipe
systems

Well valve II generation
- an optimized solution
for a well-functioning
well

Twister valve
- the perfect coupling
between twin and
single-pipe systems

Standard pre-insulated
- available with
0, 1 or 2 service valves

Hot tapping valve
- for a safe and unpro-
blematic connection
of new consumers

Standard valve
female/female
- a reliable and well-
known solution

Flexible main stop
- a functional solution
adaptable to any utility
room or basement

BROEN BALLOFIX®

A wide range
- of the original
BALLOFIX® valve

BROEN BALLOREX®

A range of valves
- for exact
commissioning

ACCESSORIES

Hot tapping tools
Basic set of tools
DN 15 – 50

Hot tapping tools
Supplementary set
DN 65 – 100

Flexible extensions
Designed for underground
valves

Handle and T-handle
Ergonomically correct in
characteristic colours

ISO flanges
For later mounting of
actuator

Hexagon
For insertion key and with
backstop for high model

**Mobile and bevel-gear
actuators**
For all dimensions

Well cover
Flexible finish for a
well-functioning well

Hot tapping valve
Connect new consumers
– simply and safely
